FEMICIDE

BECAUSE...

MONTHLY FEMICIDE IN ONTARIO FACTSHEET

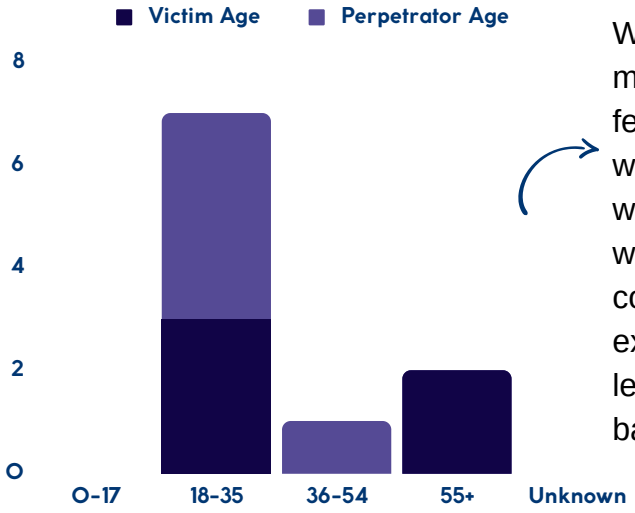

JANUARY 1ST- JANUARY 31ST, 2022

Quick Facts

- **Femicide** is the intentional killing of women, children and other gender-diverse individuals, by men
- Since 1995 OAITH has tracked Ontario femicides from **November 26th to November 25th** on an annual basis.
- A total of **58 femicides** were included in the 2020-2021 Annual Femicide List

OAITH Femicide Data- Monthly Comparison				
2020-2021	# of Femicides	2021-2022	# of Femicides	Change
January 2021	7	January 2022	5	(-) Decrease

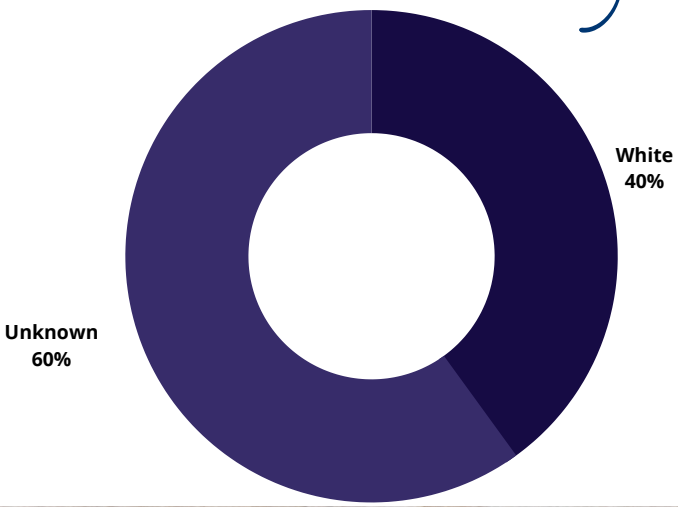

Victim & Perpetrator Age Comparision

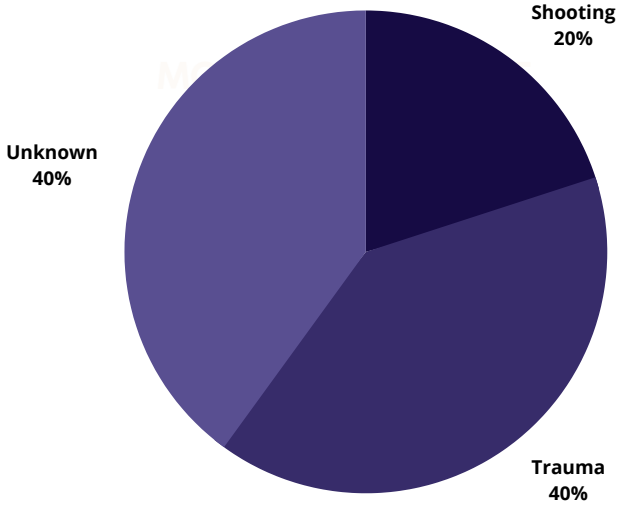

While the majority of femicide victims were young women, older women continue to experience lethal gender-based violence.

An ongoing limitation of OAITH's femicide data is the lack of race-related data included in media reports.

Victim Race

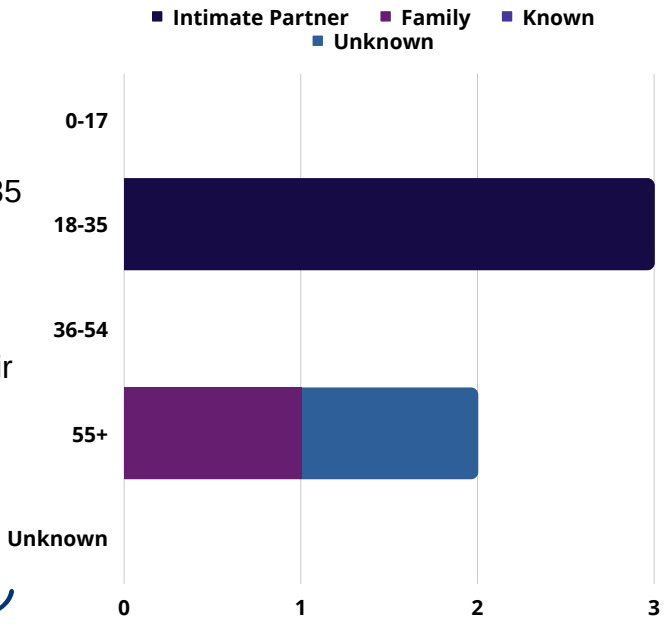

Cause of Death

Victim Age & Perpetrator Relationship Comparison

Young women between the ages of 18-35 were at the greater risk for being killed by their current or former intimate partner.

MONTHLY HIGHLIGHT

Intimate partner femicide continues to be the most common type of femicide, accounting for 60% of all femicides occurring in Ontario in January 2022. As highlighted by the January femicide data, young women between the ages of 18-35 are most commonly killed in intimate partner femicides, either by their current or former partner. These findings highlight the need for increased education and prevention measures to be implemented for young girls and boys before they begin dating. Education on consent, healthy relationships, power, control and abuse, and healthy masculinity will be integral to preventing future gender-based violence.
