

The Neurobiology of Gender-Based Violence Across The Lifespan

About this course

In this self-paced course you will learn about the neurobiology of trauma, trauma work, and the application of trauma informed approaches in working with survivors of gender-based violence across the lifespan. This course was created to supplement the information provided with the online application (also available as a PDF) “Her Brain Chose For Her”, an interactive tool which provides a foundation for the information included in this course (and is required reading in preparation for this course). This course is intended for anyone working with women who have experienced violence and has a focus on Ontario-based content and resources.

You will learn

1. The age-specific considerations of intersectional trauma-informed support for Gender-Based Violence (GBV) survivors
2. Applying age-specific considerations to direct service across sectors
3. Trauma-informed strategies to promote wellness for service providers working with GBV survivors

After completion you will be able to

1. Incorporate the elements of trauma-informed approaches into your work with women across the lifespan who have experienced various forms of abuse/violence
2. Understand how the brain processes and recalls traumatic events and how to best provide support, and assess the support needs of older women who have experienced GBV
3. Develop a plan focused on mitigating impacts of trauma work within your life, workplace, and community
